For two-letter codes and other abbreviations, refer to the "Guidance Notes an Codes and Abbreviations" appearing at the beginning of each regular issue of the PCT Gazette.

(54) Title: LOAD BEARING INTERVERTEBRAL DISK

(57) Abstract: An implant useful as a prosthetic replacement of an interventebral disk which consists of a housing (9) providing at least a part simulation of a disk yet containing a force transferring media (11). The housing (9) is in the form of a bellows or equivalent structure preferably restricted (10A, 10B) as to maximum separation between those surfaces of the housing to be in contact with the proximate vertebral bodies thereby to limit angular distortion under the effect of the proximate vertebral bodies.

International application No. PCT/NZ2004/000069

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1.	Statement		
	Novelty (N)	Claims 5	YES
	Tanada (70)	Claims 1-4, 6-11	NO
	Inventive step (IS)	Claims	YES
	Industrial applicability (IA)	Claims 1-11	NO
		Claims 1-11	YES
2	Citations and combane (D. 1. 70.0)	Clairns	NO

2. Citations and explanations (Rule 70.7)

#### NOVELTY (N) Claims 1-4, 6-11:

D1 - WO 2000/035382 A1

D2 - US 6527804 A

D3 - US 5002576 A

D4 - US 6419704 B1

D4 discloses the features of claims 1 to 4 and 8 to 11. Figures 5C or 7 for example show space confinement housings that are inflated with air, gas, liquid, oil, saline, elastomer or gel materials to make a compressible intervertebral disc. The upper and lower surfaces of the disk may move relatively towards each other and/or angle relative to each other. The maximum separation of the upper and lower surfaces is limited by panels attached to adjacent vertebrae as shown in figures 4F to 4H. These panels may be metal, nylon mesh or cloth fabric. See column 7 lines 29 to 50 of D4.

D1 to D3 each disclose the features of claims 1 to 3 and 6 to 10. For example, D1 shows in figure 1 a housing comprised of end plates 4 and bellows 10. Within this housing is a compressible fluid 12 and a compressible body 14. The plates 4 can incline relative to each other or move towards each other. See column 3 lines 26 to 37.

#### INVENTIVE STEP (IS) Claims 1-11:

D5 - US 6248106 B1

D6 - US 6063121 A

D7 - US 4759769 A

Claims 1-4, 6-11: As per novelty above.

International application No. PCT/NZ2004/000069

### Box No. VIII Certain observations on the international application

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made:

- 1. Claim 1 is not fully supported by the description because it is not restricted to an intervertebral disc, to which the description is directed.
- 2. Claim 7 lacks clarity because the scope of "an adaption of" (lines 1-2) is not clear. It is unclear how much the housing can be adapted and still be within the scope of the claim.
- 3. Claim 10 lacks clarity because it is not clear whether the features in brackets are defined in the claim or not. For example, the last five lines of the claim are in brackets and it is unclear whether these features in the brackets are meant to be considered the same as the feature defined on line 3 of the claim which has "(if necessary)" preceding it, or whether they are meant to be considered in some other way.
- 4. Claims 5 at lines 4-5 and claim 10 at lines 8-9 lack clarity because there is a bracket missing from somewhere in these lines.

International application No. PCT/NZ2004/000069

Supplemental Box

In case the space in any of the preceding boxes is not sufficient.

Continuation of: Box V

Claims 4, 5, 11: D5 to D7 each disclose means for limiting the maximum separation of the top and bottom surfaces or for limiting the motion of the housing. D5 shows in Figure 1A cables attached to adjacent vertebrae to restrict the relative movement of the vertebrae, D6 shows wires 94 as part of the prosthesis itself which limit the maximum separation of the plates, while D7 shows in figures 9 and 10 cables 110 which limit the maximum opening of the prosthesis. The wires of D6 are not disclosed as for limiting the separation of the upper and lower plates of the prosthesis, but nevertheless they do perform this function. Limiting the motion of a prosthetic intervertebral disc is considered to be a feature well known in the art. Therefore using the motion limiting features found in D5 to D7 with any of the discs disclosed in D1 to D4 is not considered to be inventive. I consider that this difference between the claimed invention and the citation constitutes no more than a mere workshop improvement. It is an arrangement that any competent worker in the art would be expected to make directly and without difficulty and by routine steps alone. Therefore the claimed invention does not involve an inventive step. D5 discloses the motion limiting features of claims 4 and 11, while D6 and D7 disclose the motion limiting features of claims 4, 5 and 11.

Claims 6, 7: D4 does not disclose the bellows shape defined in these claims. However a bellows shape is considered to be well known in the art and therefore its inclusion does not render claims 6 and 7 novel.
